# technology at work for you

CONNECTING YOUR BUSINESS TO THE TECHNOLOGY RESOURCES YOU NEED

M-Soft-Steel (MSS) is the result of more than 15 years of experience in, and knowledge of, the steel sector. MSS is a unique, modular ERP solution designed specifically for the steel business, including ferrous, non-ferrous and iron goods.

MSS offers functionalities that have been created with the steel industry in mind, rather than try to adapt a "general" ERP solution.

CUSTOM SOLUTIONS

## flexible solutions for your business needs

### KEY FEATURES

- Highly customizable item management system, catering for the various item types as well as their unique features and the relevant treatments.
- Highly automated business flow, with single data input along the entire business process. Quotes, orders, price enquiries, sales, purchases, treatments, invoices, warehouse notes, delivery notes, all derive from the same initial data input: cost reduction opportunity.
- Highly flexible ERP solution, catering for multi-offices, multi-country, multi-language business structures.

A thorough parameterisation process is carried out by our consultants in co-operation with your users, aimed at capturing the unique features of the steel sector as well as adapting our software module(s) to your business structure and flow, rather than the other way around. This means that only the features and components relevant to your company are active in the system, increasing efficiency and cost-effectiveness, as well as reducing potential mistakes.

MSS can integrate easily with our additional modules (e.g. accounting) or can be integrated with existing ERP solutions (e.g. SAP, Oracle).

### TECHNOLOGY CONSULTING PROVIDES

A TOTAL END TO END SOLUTION

An IT project cannot succeed without the support from the outset of specialists who understand your sector. MSS will be installed by senior M-Soft consultants, with more than 15 years of experience in the steel / metal sector. They are always ready to help you make the most out of M-Soft-Steel.
